316 Stainless Steel Control Units Data

Sizes 1” [DN25] - 108” [DN2700] - 150-lb Drilling | 0000-0000-4.16

- Outer Grommet, Inner Bare (GR/B)
- Inner Compression Sleeve (W/S)
- Outer & Inner Washer (W/W)
- Outer Grommet, Inner Washer (GR/W)
- Outer & Inner Spherical Washer (SW/SW)
- Outer Spherical Washer, Inner Washer Integral Design (INT-SWW)
- Outer Spherical Washer, Inner Washer Integral Design (INT-SWSW)
- Outer Spherical Washer, Inner Bare Integral Design (INT-SWB)
- Outer Washer, Inner Bare Integral Design (INT-WB)
- Outer Washer, Inner Bare Integral Design (INT-WB)
- Outer Washer, Inner Bare Integral Design (INT-WB)

Above configuration corresponds to data on sheet 2

</tbody>
</table>

1) Maximum Control Unit lengths and diameters, as well as gusset thickness, are meant to assist in determining adequate clearance and mating hardware selection. The values are maximum values and are based on mild steel design. Dimensions will change when using high tensile steel and with different arrangements. Contact General Rubber and request a specific submittal drawing for your job.

2) Expansion joints should be installed between anchors. Anchors should be located at changes in pipe direction and guides should be spaced accordingly to industry standards. Piping must be supported so that the expansion joints do not carry any pipe weight. Contact General Rubber for more details.

3) WARNING: Control Units (sold separately) must be used when piping is not properly anchored. Number of rods are dependent upon maximum field test pressures. Expansion joints may operate in pipelines carrying fluids at elevated temperatures and pressures, so precaution should be taken to ensure proper installation and regular inspection. Care is required to protect personnel in the event of leakage or splash. Adequate floor drains are always recommended.

4) Outer and inner Control Unit gaps are set to a maximum of 1/2 the allowable movements, equal on each side so that the sum does not exceed the allowable movement in any direction.

5) Above data uses outside nuts only - example GR/B, W/B, SW/B. For internal hardware & integral design contact General Rubber for control units pressure & data.
