

Flex-Valve®

Replacement Components

Parts:

With "Original Pinch Valve" drawings dating back to the 1940's, we operate the world's largest pinch valve spare parts department. Many Flex-Valve styles were "one of's" or discontinued long ago. However, replacement parts are still available. From a simple "O-ring" to an intricate machined part, we have maintained the engineering experience and records to get you up and running again.

Sleeves:

Flex-Valve can manufacture replacement pinch valve sleeves with original or improved performance characteristics. The sleeve is the most critical component of the pinch valve, and yet its construction and materials can vary significantly. Replacement sleeves are also available for all popular pinch valve brands, and in most cases, will outperform the original equipment. Custom and non-standard sleeves can be manufactured to customer specifications.
